CLEANING AND MAINTENANCE PRODUCTS – DESCRIPTION PAGE 12
MAINTENANCE OF KÄHRS WOOD FLOORS
IN DOMESTIC ENVIRONMENT

To retain their original durability and beautiful appearance, Kährs wood floors should be maintained following a simple regime. We have the strongest floor lacquer on the market, which reduces the risk of microscratches – the tiny, irritating scratches that can appear in the lacquer surface when, for example, furniture with worn protective pads is dragged across the floor. Kährs Lacquer makes the surface easy to care for because stains have difficulty adhering.

Meanwhile, Kährs Woodloc® and Woodloc® 5S joints produce tight, barely visible joints, which is also an advantage in cleaning and maintenance. The elasticity of the Kährs surface treatment is designed to follow the wood’s natural movements between summer and winter, whether the boards are lacquered or oiled. All this means is that a Kährs floor is easy to maintain.

Stained products lose their original colour when their surfaces are renovated. This should be borne in mind when maintaining the floor. Materials used for maintenance are uncoloured. Particular consideration must also be given to products with a special finish.

MAINTENANCE OF LACQUERED FLOORS

DAILY CLEANING

For daily cleaning, use dry methods, e.g. vacuuming or micro mop.

REGULAR MAINTENANCE

Make sure that the surface is free from any dirt or debris that may scratch the surface, by vacuum cleaning or dry mopping. Dissolve the Cleaner in lukewarm water according to dosage information on the bottle. – or use the ready-to-use Kährs Spray Cleaner.

Damp-clean the floor as necessary using a well-wrung mop or floor cloth. Only dampen the floor slightly. The film of water left by the floor cloth must dry within a minute. Do not allow spilt water to remain, especially on Beech and Hard Maple (Canadian Maple) floors because they are particularly sensitive to moisture. The frequency of damp cleaning depends on the level of usage and contamination.

Note: Never pour water onto wood floors. Use a cloth wetted with water and squeezed dry.

STAIN REMOVAL

Remove stains as soon as possible following the advice given below.

Use strong stain-removers with care, because using too much or rubbing too hard can affect the lacquer.

Do not allow spilt water to remain on the floor, especially on Beech and Hard Maple (Canadian Maple) floors.

MAINTENANCE ON DEMAND

Kährs Lacquer Refresher and Matt Lacquer Refresher are easy-to-use refreshers for finished parquet and wooden floors. The product gives the wood a protective top surface which simplifies the cleaning and maintenance process. It is not a substitute for re-lacquering. It is used between each re-lacquering.

Kährs Lacquer Refresher is suitable for Kährs lacquered floors and High Gloss lacquered floors.

For Kährs Matt lacquered and Ultra Matt lacquered floors, the Kährs Matt Lacquer Refresher should be used.

Note, the more coats that are applied, the higher the gloss value.

The floor to be treated must be clean and free from polish, wax and other contaminants. Vacuum thoroughly and remove all traces of grease by damp cleaning using Kährs Cleaner.

Dissolve the Kährs Cleaner in lukewarm water according to dosage information. Then wipe off the surface with a well wrung-out mop or cloth.

For very dirty floors or if the surface has been treated with polish or other treatments, first clean the floor with Kährs Remover.

Heavy duty cleaning: 50–100 ml/10 liter water, Polish Removal: 500–1000 ml/10 liter water.

1. Spread out the mixture with a sponge or cloth. Use as little mixture as possible.
2. Allow to react for a few minutes and then work in with a scrubbing brush.
3. Wash the floor with clean water with a slightly damp cloth. Use as little water as possible. Be careful with beech wood species, because too much moisture might damage the short ends of boards or strips.

Now the floor is ready to be treated with Kährs Lacquer Refresher.

1. Apply the Kährs Lacquer Refresher or Kährs Matt Lacquer Refresher with a damp mop or cloth.
2. Let the Refresher dry for minimum 45 minutes before replacing furniture. Heavier items as well as rugs need curing at least for 24 hours. Good ventilation and normal room temperature (20°C) minimize the drying time.
3. Allow floor to dry for a few hours without wear.

It is important to maintain stained products in good time. Do not allow the stained finish to wear.
MAINTENANCE OF KÄHRS WOOD FLOORS

RENOVATION (RE-LACQUERING)

The main reason for re-lacquering is that after many years’ use, the floor needs to be “freshened up”.

There are three methods for: floors with satin lacquer, matt lacquer and for high gloss lacquer. Chose the method that matches the floor surface treatment of your floor.

For Kährs floors with silk matt lacquer:
The surface to be finished must be free of dust, dirt and other foreign materials. If the floor surface is heavily contaminated, use a rotary floor scrubber (for screeding) to ensure that the floor is free from grease and dirt.

The temperature of the floor should not be below 14°C nor exceed 28°C. Ideal is 20°C floor temperature and a relative humidity of 55%.

Shake the container before use, open and allow time for air to vaporize prior to application. Always test the finish on a smaller area to ensure colour and adhesion.

For Kährs floors with matt lacquer:
The surface to be finished must be free of dust, dirt and other foreign materials.

First use Kährs Remover for heavy duty cleaning or to remove Kährs Lacquer Refresher and wax based polishes.

**Recommended dosage:**
Heavy duty cleaning: 50–100 ml / 10 l water.
Polish Removal: 500–1000 ml / 10 l water

**Application**
Spread out the mixture with a sponge or cloth. Use as little mixture as possible.

Allow to react for a few minutes and then working in with a scrubbing brush.

Wash the floor with clean water with a slightly damp cloth. Use as little water as possible. Be careful with beech wood species, because too much moisture can damage the short ends of boards or strips.

When the floor is completely dry it is time for re-lacquering with Kährs Matt Lacquer Floor Finish.

Add the hardener to the lacquer and mix thoroughly before use. Open and allow time to vaporize prior to application (10 minutes). To be used within 4 hours.

Always test the finish on a smaller area to ensure colour and adhesion.

**Recommended application:**
1 coat, coverage 0.1l/m².
Apply with roller, brush or applicator.

You can walk on the floor 8 hours after the last coat. The surface can hold lighter pieces of furniture after 24 hours. Heavier items as well as rugs need to await curing at least four days.

Allow at least 3 weeks before using alkaline cleaning products.

For Kährs floors with satin lacquer, matt lacquer and for high gloss lacquer. Chose the method that matches the floor surface treatment of your floor.

For matt lacquered floors

Recommended application:
1 coat, coverage 0.1l/m².
Apply with roller, brush or applicator.

You can walk on the floor 8 hours after the last coat. The surface can hold lighter pieces of furniture after 24 hours. Heavier items as well as rugs need to await curing at least four days.

Allow at least 3 weeks before using strong alkaline cleaning products.

When the floor is completely dry it is time for re-lacquering with Kährs Matt Lacquer Floor Finish.

Add the hardener to the lacquer and mix thoroughly before use. Open and allow time to vaporize prior to application (10 minutes). To be used within 4 hours.

Always test the finish on a smaller area to ensure colour and adhesion.

**Recommended application:**
1 coat, coverage 0.1l/m².

You can walk on the floor 8 hours after the last coat. The surface can hold lighter pieces of furniture after 24 hours. Heavier items as well as rugs need to await curing at least four days.

Allow at least 3 weeks before using alkaline cleaning products.
MAINTENANCE OF KÄHRS WOOD FLOORS

TOTAL RENOVATION

If the floor is heavily worn, or needs renovation for some other reason, it can be machine-sanded to bare wood and have a new surface treatment applied – using Kährs Lacquer.

Note. A total renovation will radically change the surface appearance on stained products, floors with bevelled edges and/or brushed surface finishes.

The surface to be finished must be free of dust, dirt and other foreign materials. The temperature of the floor should not be below 14°C nor exceed 28°C. Ideal is a 20°C floor temperature and a relative humidity of 55%.

Shake the container before use, open and allow time for air to vaporize prior to application. Always test the finish on a smaller area to ensure colour and adhesion.

Recommended application:
3–5 coats. Apply with roller, brush or applicator.

You can walk on the floor 8 hours after the last coat. The surface can hold lighter pieces of furniture after 24 hours. Heavier items as well as rugs need to await curing at least four days.

Allow at least 3 weeks before using strong alkaline cleaning products.

Recommended application: P-GRADE 350–500

For Kährs floors with high gloss lacquer:
The surface to be finished must be free of dust, dirt and other foreign materials. If the floor surface is very soiled, use a rotary floor scrubber (for screeding) to ensure that the floor is free from grease and dirt. Screeding quality should be P 350–P 500.

The temperature of the floor should not be below 14°C nor exceed 28°C. Ideal is 20°C floor temperature and a relative humidity of 55%.

Shake the container before use, open and allow time for air to vaporize prior to application. Always test the finish on a smaller area to ensure colour and adhesion.

Recommended application: 1 coat, coverage 0.1l/m². Apply with roller, brush or applicator.

You can walk on the floor 8 hours after the last coat. The surface can hold lighter pieces of furniture after 24 hours. Heavier items as well as rugs need to await curing at least four days.

Allow at least 3 weeks before using alkaline cleaning products.

Note. Kährs Linnea cannot be sanded.
MAINTENANCE OF OILED FLOORS

AFTER INSTALLATION
Kährs nature oil finished floors should be given a supplementary surface treatment with Kährs Satin Oil. The main reason for this is to prevent water penetrating the joints between boards through capillary action. The treatment also gives the floor additional overall protection & makes it more resistance to daily traffic.

Recommended dosage:
1 l of Kährs Satin Oil per 200–300 m²

For further instructions, see Maintenance on Demand, page 10

Position doormats inside and outside the front door to stop dirt and grit being brought in that could otherwise cause unnecessarily severe wear to your floor. Use protective pads (not metal feet, which mark wood floors) on furniture to avoid unnecessary marks and scratches on the floor.

Kährs clear Satin Oil is available in two versions:
- Kährs Satin Oil
- Kährs Satin Oil Matt

DAILY CLEANING
For daily cleaning, use dry methods, e.g. vacuuming or microfiber mop.

REGULAR MAINTENANCE
Make sure that the surface is free from any dirt or debris that may scratch the surface, by vacuum cleaning or dry mopping. Dissolve the Cleaner in lukewarm water according to dosage information on the bottle. – or use the ready-to-use Kährs Spray Cleaner.

Damp-clean the floor as necessary using a well-wrung mop or floor cloth. Only dampen the floor slightly. The film of water left by the floor cloth must dry within a minute. Do not allow spilt water to remain, especially on Beech and Hard Maple (Canadian Maple) floors because they are particularly sensitive to moisture. The frequency of damp cleaning depends on the usage and contamination.

STAIN REMOVAL
Remove stains as soon as possible following the advice given below.

Use strong stain-removers with care, because using too much or rubbing too hard can affect the lacquer.

When you damp-clean a floor, it should dry within one minute if you have used the correct amount of water.

Do not allow spilt water to remain on the floor, especially on Beech and Hard Maple (Canadian Maple) floors.

MAINTENANCE OF KÅHRS WOOD FLOORS

MAINTENANCE ON DEMAND

How often the floor then needs maintaining depends on use, cleaning, exposure to sun light etc. A couple of additional, more frequent, maintenance treatments carried out in the first year gives an extra-strong, moisture-resistant and easily cleaned surface. The normal frequency of subsequent maintenance is at least twice a year. Remember that areas subjected to greater wear than the rest of the floor can be given localized maintenance. The higher the frequency, the better the results. The surface to be maintained must be dry and free of dust and dirt.

Instruction
1. Vacuum clean the floor carefully.
2. Clean the floor using Kährs Cleaner and Microfiber Mop. Follow the Kährs Cleaner instructions. Only damp cleaning, the surface should be dry again within a minute. For very dirty floors replace the microfiber mop using a rough brush.
3. Remove cleaner and contamination using a wrung out cloth.
4. Dry the surface using a dry cloth and leave the floor to dry for 30 minutes. For heavily contaminated floors or on floors with heavy textures, it might be necessary to repeat step 2–4.
5. Apply a thin layer of Kährs Satin Oil on the surface and spread it evenly with a Kährs Microfiber Mop or a dry cloth by scrubbing along the texture. Polish again with a new Microfiber Mop after 10–15 minutes so that no sticky parts are left. Please observe that two thin layers of oil give a better result than one thick layer. Applying a large amount of oil will result in a sticky surface.

After a drying time of 5 hours, the floor can be used with care, but needs 12 hours before lighter furniture can be moved back. Wait 24 hours to move back carpets and heavier furniture.

Recommended Dosage
After Installation: 1 l of Kährs Satin Oil per 200–300 m²
Normal to lightly contaminated floors: 100 ml (1 dl) of Kährs Satin Oil per 30 m²

Kährs clear Satin Oil is available in two versions:
– Kährs Satin Oil
– Kährs Satin Oil Matt

RENOVATION

After extended use, it may be necessary to renovate the surface treatment and replace it with a new oil treatment.

1. Apply Kährs Cleaner evenly over the surface.
2. Clean the surface using Kährs microfiber mop. Scrub until the dirt has been dissolved. For very dirty floors replace the microfiber mop using a rough brush.
3. Remove cleaner and dirt using a wrung out cloth.
4. Dry the surface using a dry cloth and leave the floor to dry for 30 minutes. For heavily contaminated floors or on floors with heavy textures, it might be necessary to repeat step 1, step 2, and step 3.
5. Apply Kährs Satin Oil on the surface. Use Kährs Microfiber Mop and spread the oil evenly. This is done by scrubbing both along and across the floor board until a very thin and even oil layer is reached.
6. Let the surface rest for 10–15 minutes.

In case of surfaces with excessive wear it might be necessary to repeat point 5 and 6.

7. Polish the surface using a new dry Microfiber Mop. This is done to make sure that the oil has been evenly spread.

Please observe that two thin layers of oil give a better result than 1 thick layer of oil. Applying a large amount of oil will result in a sticky surface.

Recommended dosage
100 ml (1 dl) of Kährs Satin Oil per 30 m².

Kährs clear Satin Oil is available in two versions:
– Kährs Satin Oil
– Kährs Satin Oil Matt
MAINTENANCE OF OILED FLOORS

RENOVATION OF STAINED FLOORS

After extended use, it may be necessary to renovate the surface treatment and replace it with a new Tinted Satin Oil treatment.

1. Apply Kährs Cleaner evenly over the surface.
2. Clean the surface using Kährs microfiber mop. Scrub until the dirt has been dissolved. For very dirty floors replace the microfiber mop using a rough brush.
3. Remove cleaner and dirt using a wrung out cloth.
4. Dry the surface using a dry cloth and leave the floor to dry for 30 minutes.

For heavily contaminated floors or on floors with heavy textures, it might be necessary to repeat step 1, step 2, and step 3.

5. Apply Kährs Stained Satin Oil on the surface. Use Kährs Microfiber Mop and spread the oil evenly. This is done by scrubbing along and across the floor board until a very thin and even oil layer is reached.

Let the surface rest for 10–15 minutes.

If a stronger recolouring is needed, repeat step 5 and step 6. This can be done maximum 3 times, since too thick layers will result in a sticky surface.

Polish the surface using a new dry Microfiber Mop. This is done to make sure that the oil has been evenly spread.

Please observe that two thin layers of oil give a better result than 1 thick layer of oil. Applying a large amount of oil will result in a sticky surface.

Recommended dosage
100 ml (1 dl) of Kährs Satin Oil per 30 m²

TOTAL RENOVATION

If the floor is heavily worn, or needs renovation for some other reason, it can be machine-sanded to bare wood and have a new surface treatment applied. For a new oiled surface, please contact your local dealer.

Note. A total renovation will radically change the surface appearance of stained products, floors with bevelled edges and/or brushed surface finishes.

Note! Using Kährs Satin oil, a danger of self-ignition exists in contact with organic materials (e.g. cotton cloths, saw dust, absorbing insulation materials etc.) due to self-drying oil content. Rags and other organic materials soaked in oil have to be put into water immediately after use, in order to avoid self-ignition.
MAINTENANCE OF KÄHRS WOOD FLOORS

KÄHRS CLEANER 1,0 LITER
– effective cleaner for lacqured and oiled floors

Kährs Cleaner is an effective and environment friendly product specifically formulated for cleaning wood and floors. Does not contain any organic solvents or pigments.

Art no. 710518

KÄHRS SPRAY CLEANER 0,75 LITER
– effective cleaner for lacqured and oiled floors

Kährs Cleaner is an effective and environment friendly product specifically formulated for cleaning wood floors.

Does not contain any organic solvents or pigments. For normal daily cleaning. Ready to use.

Art no. 710529

KÄHRS REMOVER 1,0 LITER
– effective remover of polishes and lacquer refresher

Kährs Remover is a remover for Kährs Lacquer Refresher and Wax based polishes from wooden floors. Kährs Remover can also be used for heavy duty cleaning.

Art no. 710523

KÄHRS LACQUER REFRESHER 1,0 LITER
– restores finished floors

Kährs Refresher is an easy-to-use refresher for finished parquet and wooden floors. The product gives the wood a protective top surface which simplifies the cleaning and maintenance process. Kährs Lacquer Refresher should be used on Lacquered and High Gloss Lacquered Kährs floors.

Art no. 710522
MAINTENANCE OF KÄHRS WOOD FLOORS

KÄHRS MATT LACQUER 1,0 LITER
- floor finish

Kährs Matt Lacquer is a 2-component water based polyurethane finish for wood and parquet floors. Suitable for relacquering of matt-lacquered Kährs-floors. Apply with roller, brush or applicator. The finish has excellent durability and is highly resistant to mechanical wear and commonly used household cleaners and detergents. Kährs Matt Lacquer is suitable for domestic and commercial use.

Art no. 710519

KÄHRS LACQUER
- floor finish

Kährs Lacquer is a one-component water based polyurethane/ acrylate finish for wood and parquet floors. Suitable for re-lacquering of satin lacquered Kährs-floors. Apply with roller, brush or applicator. The finish has excellent durability and is highly resistant to mechanical wear and commonly used household cleaners and detergents. Kährs Lacquer is suitable for residential and commercial use. Kährs Lacquer is suitable for residential and commercial use, as well as Sport floors.

Art no. 1,0 liter: 710521
Art no. 5,0 liter: 710519

KÄHRS MATT LACQUER REFRESHER 1,0 LITER
- restores finished floors

Kährs Refresher is an easy-to-use refresher for finished parquet and wooden floors. The product gives the floor a protective top surface which simplifies the cleaning and maintenance process. Kährs Matt Lacquer Refresher should be used on Matt Lacquered and Ultra Matt Lacquered Kährs floors.

Art no. 710541

KÄHRS HIGH GLOSS LACQUER 1,0 LITER
- floor finish

Kährs high gloss Lacquer is a 2-component water based polyurethane finish for wood and parquet floors. Suitable for re-lacquering of high gloss-lacquered Kährs-floors. Apply with roller, brush or applicator. The finish has excellent durability and is highly resistant to mechanical wear and commonly used household cleaners and detergents. Kährs high gloss Lacquer is suitable for domestic and commercial use.

Art no. 710630

SATIN OIL 1 LITER
- clear maintenance oil

Kährs Satin Oil is a hardening urethane oil for maintaining wood and parquet floors. Satin Oil gives the floor a protective oil layer with a beautiful shine. Satin Oil protects by penetrating the floor surface.

Art no. 710553
PARQUET POLISH
- restores finished floors

Kährs Parquet Polish is an effective, environment friendly product that revives finished wood and parquet floors. Self-polishing, waterproof and protecting against mechanical wear, Kährs Parkett Polish both cleans and protects your floor.

Art no. 710520

SPRAY MOP KIT

Complete cleaning kit for damp mopping of wooden floors. Suitable for both lacquered and oiled floors. Convenient and ergonomic use with trigger controlled cleaner application. The kit includes: Mop holder plate with an ergonomic pole, Replaceable Spray Cleaner tank 0.75 liter, Cleaner Spray 1 liter, 3 pieces of high end washable microfiber mop with Velcro anchoring.

Art no. 710574
**SPRAY MOP CLEANER 0.75 LITER**

Refill Package for Spray Mop Kit

Art no. 710576

---

**KÄHRS FLOOR CARE KIT**

The perfect all in one cleaning solution for your Kährs floor. The kit contains a 0.75 litre bottle of Spray Cleaner, a dry mop, and felt floor protectors.

---

**KÄHRS MOP PAD**

Replacement pad for your Kährs mop to be used only with Kährs Spray Cleaner. Machine washable.

Art no. 710512
